## FOREWORD

How do you describe a passion that only those that share it can really understand? In what way do you justify a life of devotion to crystalized water and surfing mountains to those that don't do it? This is year number 20 for Smokin' Snowboards, how crazy is that? 20 years of hand building snowboards in the shadows of Lake Tahoe's towering peaks and endless terrain and not a day goes by that we don't constantly tinker with ideas and ways to improve how you/we connect to frozen water. Sounds a little ridiculous to devote a lifetime of work to snow but it's all we want to do. 365 days a year, even when snow has surrendered itself to the sun and returned to its watery form, our focus remains the same, designing and hand building the finest Premium Quality Snowboards in the world.

2014 was another season of new ideas put to the test. The new Awesymmetrical shape and our new TTX Rocker stood out with multiple international awards and shinning reviews. The average person would be satisfied with such results. We at Smokin' Snowboards have taken this as an opportunity to expand on those ideas. After the massively positive response to the Awesym we decided the girls deserved to have the same tech so we created the Fawesym. Lungie wanted custom tips,

OG mag and camber on his pro-model so we made the move then we Improved the Team board by adding the award winning Asym sidecut and a traditional radial shape to the new 2015 model. On the plane ride home from a misty trip to France we created the new Future Freeride Series which gives riders an entirely new way to connect with the mountains and supports the idea of taking snowboarding 'Back To The Woods' with a new Split, Twin, and Powder shape.

In our pursuit for perfection we have created, tested, and proven our reliability and in turn have always stood behind our products with a 3 year warranty. Our commitment to being Eco friendly always pushes us to find ways to reduce our environmental impact on the planet and we have implemented as many policies as we can to maintain our R3 practices, then it dawned on us, the best way to reduce the waste from snowboard manufacturing is to make less boards. Counter intuitive to the very idea of owning a snowboard company but it is the reality. With production "limited to order" and a board that we guarantee will last you three years we have achieved a new point in ecological responsibility.

"Better Ecology, Through Better Quality".

We are proud of our 2015 collection. We combined collective ideas from our family of team riders, retailers, international sales force, designers and factory staff to design and produce the absolute best line we ever have. Our commitment to producing the finest snowboards on the planet shows in the organic growth of our brand and we do not intend to change anything about it. We are snowboarders just like you and we support the movement to keep snowboarding in the hands of people like us, people who care about snowboarding.

# AWESYM

**148, 152, 156, 156W, 159, 159W, 162, 162W**

Last year we introduced our new Awesymmetrical model to the world. It was a huge step for us in design and the result was astonishing. The industry and the riders apparently agreed, our trophy case filled with awards, and the Awesym lived up to it's name taking the number one spot in the Smokin' line. That being said for 2015 the only change we made is we are now offering it with our team preferred TTX rocker/camber combo. The Awesym sports the same asymmetrical side cut and tips with the same dream package of features and materials including Pop-Gnarly, VDFLU, Mellow Mag, and a Good Wood Core for a ride that will excel in any condition from waist deep pow on the peaks of Chamonix to park laps at the local shred hill. Stoke your inner nerd with Sacred G nebula graphics and ride the Awesym straight to space!

6 FLEX

We believe in loyalty. Rewarding shops and riders that have stood behind us over the years is a form of gratitude we express each year in our limited models. Available only from select dealers our SuperPark Ltd. sports the exact same flex, features, and materials as it's paternal twin but only in CTX and TTX rocker camber combos. This go anywhere do anything twin will keep you stoked on the shred for years to come. Combined with a clean and modern graphic by a well known snowboarding artist who's name we can't even mention (you can figure out who it is on your own). This board looks so fine you can proudly display it on your wall between shred sessions and be happy knowing you have a literal working piece of art.

# 156, 159, 159W, 162, 162W, 166, 166W **KT22** <sup>8</sup> FLEX

The original Smokin' Snowboards model made after the most O.G. lift in Tahoe. KT22 at Squaw Valley USA. is notorious for the steep epic world class mountain terrain it accesses and this board is made for riding it. From wide open pow runs and cliff drops to hammering through chop and and ripping trees, this stiff, stable, directional all mountain dream machine delivers the ride you need to charge hard and keep it together. Loaded like a luxury work truck with the materials it needs to handle the heaviest terrain and features like three stage dampening and PoP-Gnarly to smooth out the ride. VDFLU protects your deck from the stresses of big mountain riding and our standard sintered 6k base keeps you hauling ass longer and the base stronger. We topped it with a heady Tibetan Book Of The Dead graphic to keep the vibes chill and appease the mountain gods for good karma.

# BUCK-FERTON

**147, 151, 155, 155W, 158, 158W, 161, 161W**

Buck-Ferton is DEAD.. Like any celebrity he was loved and hated by many alike. The stresses of paparazzi, tabloid shred rags, and online gossip got to him and in his sleep he passed. Or so we were told. One warm, late summer day a graphic arrived for his pro model. New for 2015 The Zombie Buck Ferton. All proceeds from his undead pro model are being transferred to him via Oija Board. Let's be honest, with Blunt tips, CTX, PoP-Gnarly, Mellow Mag and VDFLU, this board could take Buck's career to a whole new level of shred stardom in the afterlife. Pick one up while you can and get some of that voodoo power for yourself before it's too late. Buck, wherever you are, get ahold of us somehow.. We have a royalty check for you. New for 2015 we added a 158 wide, a 161 and a 161 wide for the larger humans that want to go Buck.

# LANE KNAACK 150, 153, 157

Lane Knaack is without a doubt the nicest guy in snowboarding and after 7 years as a Smokin' Pro Rider we are just as happy as ever to have him involved. Lane's Pro Model is a mid-wide for extra float, sports a prime list of features like VDFLU, PoP-Gnarly, Mellow Mag, and Lane's own custom lowered Skate Kicks. When Lane isn't shredding laps at Boreal or the asphalt of Reno on his motorcycle, he is in the Smokin' Factory building boards. Being a skilled shredder and board builder he knew exactly what goes into a perfect board for his riding style so that's exactly what he put in his pro model. Hop on a 2015 Lane Knaack pro and get that laidback

style shredding on.

"I want to give a shout out to the whole crew at the Smokin' Snowboards factory and the team cause you guys make Smokin' Snowboards "what it is" and my friends and family as well. All Love."

Over the years We have developed more than just a team. Our crew is straight up family. We also make it a point to listen to the wants and needs of our team riders. When you add it all up you get a combination of opinions from all over the world about what the riders want. We have riders in as diverse a terrain and landscape as possible. From Tahoe, Colorado, Nelson, Vermont and the crew in Europe we have compiled their wish list of features, shapes and materials into one board. The Team Model is a design enigma combining the features and benefits of our Awesym model with the look of a traditional radial tip twin. We added the mellow, flat kick Skate Tips for float with optional TTX or ATX rocker/ Anti camber options and the most drippy Rasta vibe graphic we have ever done. We stuffed the insides of this feat of modern engineering to include our Three Stage Dampening, VDFLU, A Certified Good Wood Core, Rubberized Epoxy, UHMW sidewalls that are matched to our Sintered 6K base. Not one bit of tech or top shelf material was cut from the list on this, our best team model to date. Pick one up and join the Smokin' family.

# 5 FLEX MIP

147, 151, 155, 155W, 158, 158W, 161, 161W

The M.I.P. was born of the ashes of an era in snowboarding that instigated a lot of animosity. Corporate entities saw a profit margin to be made in snowboarding and dipped their junk right into the salsa bowl at our own underground party like a bunch of frat boys. The youth stood up, fists in the air and said no! We will not let stuffy old business men, completely removed from our culture and our scene control the future of our beloved winter sport. The power belongs in the hands of the youth. Like a pissed off bum high on malt liquor we revolt. Blunt tips for lower swing weight and longer effective edge. Dirt Rocker makes for easy confident, catch free snow sliding. Rubberized epoxy and Three Stage Dampening oppress those harsh vibes and VDFLU strengthens the most impact ridden areas of this tool of the modern shred resistance. Support the movement, keep snowboarding in the hands of snowboarders, mount up an MIP and show the suits that the youth really is in control. New for 2015 we added a 155W, 158W, a 161 and a 161W for the big guys that want the blunt tips in a bigger size.

# BIG WIG

150, 153, 157, 162

Big dudes wear big shoes. Big shoes means big boots. Big boots do not necessarily mean committing to a wide board. For those big boot riders out there comes a mid-wide made for quick edge response and float without going full fatty. Got a normal size boot but like like em' thick in the contacts like Lane for a little extra substance under your feet? Well then this is the board for you. Park Flex for a soft fun ride combined with Three Stage dampening makes every day easy like a Sunday Morning. This is the largest, widest, Dirt Rockered board in the line so if the MIP has left you wishing you could have a mid wide then save yourself the trouble and snag a BigWig.

# HOOLIGAN

4  
FLEX

144, 148, 152, 156

What makes a Hooligan? Is it a tendency to strike out against injustices, or to call out blatant abuse of power? Is it the ability to see through the bullshit and openly fly the flag of your movement without fear of incarceration? By definition a hooligan is "someone, usually young, who belongs to an informal group and commits acts of vandalism or criminal damage, and who causes disturbances, but is not a thief". Raoul Duke, aka Doctor Gonzo better known as Hunter S. Thompson was indeed a Hooligan of his time. His deep understanding of social injustices and political ridiculousness, paired with his skills as a journalist led him to stir the pot on many occasions. To this day we still admire his commitment to the truth and the weird. Pushing the comfort levels of social acceptance and intolerance is Smokey's favorite pastime. Stacked with the MOST important features that give a Smokin' Snowboard that signature style and ride like Certified Good Wood Cores, Three Stage Dampening, VDFLU, Sintered 6K bases and Rubberized Epoxy at a price tag for the people this board cuts through the bullshit. Sporting Jib Flex for the softest ride we have, and Dirt Rocker for carefree fun, we tailored this board for easy living on the fringe without the Fear and Loathing you would expect from a "price point" model made by some inferior brands.

# FAWESYM

6  
FLEX

140, 144, 148, 153, 156

We released the Awesymmetrical early in the 2014 season. The Awesym was an experiment gone unarguably right based on the reviews and awards it won. That said, our Vixen model has been a consistent award winner over the years as well. Mix the design principals of the Awesym with the Vixen specs and the result is pretty F@\*king Awesome. Mix those two words and you get FAWESOME which perfectly describes this board.

NEW FOR 2015 the Fawesymmetrical was designed in the image of it's male counterpart the Awesym. Featuring the same Asymmetrical sidecut and tip design tailored for the finer, more refined, female of the species. Delicately engineered for women with a softer tuned flex and narrower waist. The asymmetrical sidecut radiuses, engineered to be specific to the needs of women and the full list of premium features and materials including PoP Gnarley, Certified Renewable Good Wood Core, VDFLU, Mellow Mag, Three Stage Dampening, and a Sintered 6K base is sure to turn heads and win awards. We at Smokin' Snowboards believe women charge just as hard as men and with the wildly positive reviews of the Awesym we knew we had to share the technology with all of Smokin' Snowboards customers.

Mirrored trippy space mandala graphics and next level design combine together to create a women specific board built to take any female shredder to the next level. From first runs to first tracks the Fawesymmetrical is our best yet.

# VIXEN

140, 144, 148, 153, 156

When we set out to design the now multi TWS Good Wood Award winning Vixen model 15 years ago we knew it couldn't just be a scaled down men's board. From the very first design stages the Vixen was fully custom tailored to fit the needs of female riders. From the sidecut radiuses and flex pattern to the available stance widths, this board is built for the ladies. Based on the awards over the years and the comments from the testers we succeeded in our mission to hand build the best women's board we could. Packed with top shelf features and materials like VDFLU, PoP-Gnarly, Three Stage Dampening, Rubberized Epoxy and Mellow Mag, the 2015 Vixen is THE board to suit the modern girls needs. Year after year our good friend Pinky Taylor pumps out the most amazing girls board graphics and this year's Vixen is no exception.

FLEX

In the 15 years we have been making the Vixen we have had a few VERY loyal retailers and riders. Add to them the growing list of shops that stand behind one of the highest rated, most heavily awarded women's boards ever and the Vixen has quite a following. To reward the loyalty and consistent support of certain retailers we created our LTD series and a few years ago we added our Vixen LTD to it. Literally identical to the Vixen in all aspects of shape, design, construction and materials but available only from Select Core Retailers, is the 2015 Vixen Limited. Sporting a list of top shelf features like VDFLU, Rubberized Epoxy, UHMW sidewalls, Tri Axe Glass and a Certified Renewable Good Wood Core the Vixen Ltd. has been given the full treatment. This year our award winning board built just for the ladies gets a dose of Sacred G and Space swag. Dripping with mirrored clouds and ready to timelessly explore any terrain you can take it to, the Vixen Ltd. is sure to be a well sought after collector for the conscious female shred.

FLEX

Smokin' Snowboards Pretty Young Thing aka P.Y.T. is built for fun. Its soft, buttery, and full of jibby good times, from the terrain parks, pipes and runs of your local hill to the streets for that late night rail session. Girls looking for a short jib stick or a soft and forgiving easy rider need not look any further. We took the shapes and ideas of some of our most popular men's park boards and re-engineered them to fit the girls. Built entirely for female riders with custom tailored specs and blunt tips to lower swing weight and lengthen effective edge this D.I.R.T. Rockered shred machine can accommodate female riders of all skill levels.

Packed with premium features like Three Stage Dampening, Rubberized Epoxy, a Sintered 6K base, UHMW Sidewalls, VDFLU, and a Certified "Good Wood" core combined with an elegant modern look and fierce geometry and design with an easy on the bank price point the 2015 P.Y.T. is certain to suit your needs whether you are an experienced shredder or a beginner looking to invest in a board that will last you years. Add our Three Year Warranty and there isn't a better option out there for a female rider.

YoBeat awarded the 2014 PTY their annual and coveted Wicked Pissah Award last year in the "Token Girls Board" category. STOKED!

## 6 FLEX JETSON 152, 156, 159, 162

Brand new for 2015 the Jetson is a design straight from the future. Sporting Twin Early Rise Rockered tips, a camber plateau with shortened sidecuts and long blends the Jetson was designed to take freeriding to a whole new level. Whether you are popping Ollies jacket deep in powder, ripping rails and trails at the local shred hill or spinning into powder landings in the deep woods this board was made to blur the lines between what is possible on hard pack and in the back country. Made with the full list of top quality materials available from Smokin' Snowboards including PoP-Gnarly, Three Stage Dampening, Mellow Mag, Rubberized Epoxy, VDFLU, a Sintered 6K base, and a Certifiable "Good Wood" core the only True Twin in the new Future Free Ride Series is about to truly inject a major dose of FREEDOM into freeriding.

WTF- EARLY RISE TIPS CAMBER UNDERFOOT

## 156, 159, 162, 166 POW WOW 6 FLEX

The basis for the entire Future Free Ride Series is the PowWow. We set out to design a board made for freshies, built for effortless float in wide open powder fields and tight tree runs alike. What we ended up with was a major surprise and birthed a whole new kind of genre breaking design for Smokin' Snowboards. The Early Rise Rocker nose gives the PowWow more float than a hot air balloon in all snow conditions while the cambered, traditional tail makes for stable consistent landings and exits from turns. A shortened sidecut and a lazy blend radius from tip to sidecut increases surface area and makes for a ride unlike any other board in the history of Smokin' Snowboards. Initial testing results left us in awe of the boards insanely quick edge to edge response and pop. A planning mistake resulted in a day of slush shredding in the spring, to our surprise the PowWow proved to be ideal for sloppy conditions as well. An epic and fun night park session on the PowWow, even in hard pack conditions lead to the design and eventual birth of the Jetson. Do not mistake the PowWow for a simple lazy powder stick. This board RIPS in any condition.

WTF- EARLY RISE ROCKER NOSE CAMBER TAIL

When snowboarding began space to do it was limited to the back country, the connection to the raw wilderness was strong and shredders only knew the freedom of actual free riding without rules or limitations regarding where you could go.

Fast forward 30 years and it's difficult to find a resort that doesn't allow it. We as snowboarders have become used to the convenience of chair lifts and groomer access. From this complacency to accept the terrain given as "what there is to ride" has made for a repetitious routine that some (including the designers at Smokin) find stale. This last design season a movement was born. We decided snowboarding needs an injection of raw nature and freedom when it comes to true free riding so we created the Future Free Ride Series. A collection of boards from a split, and pow stick to a radical new twin. The intention of the Future Free Ride Series is not to replace or condemn all lift access but rather to blur the lines dividing the possibilities and convenience of groomed, maintained terrain and the pure, unaltered wild backcountry. Grab one of the Future Free Ride Series boards, throw out your routine, add some freedom to your freeriding and go "Back To The Woods".

## 156, 159, 162, 166 POW WOW SPLIT

Split boarding is coming on strong. Looking back at the time spend trudging through powder with snowshoes strapped on instead of skinning your way up the hill you have to wonder what we were thinking back in the day. Getting to the top of that line you had been spotting for years was a major, time consuming chore that usually left the rider beat down and exhausted. The convenience of gliding to the top of that previously torturous line with energy to spare makes for more laps, more accessibility, more FREE-dom, and less crap to haul up (and down) the hill on your back. Built on the same chassis, materials and design principals of the PowWow, the PowWow split adds another dimension to your Smokin' quiver. We added a Magnetraxion wiggle running down the middle of the inner edge to increase hold on sketchy traverses and decrease the stress factor involved in steep terrain navigating. Pre-drilled for Voilé hardware (sold separately) and ready to go you can rest easy knowing you don't have to cut, drill, and T-bolt your old deck because we did it for you. Grab the PowWow split and head for the woods, true FREE-riding has returned.

WTX- EARLY RISE ROCKER NOSE CAMBER TAIL

# ANNIALATOR

148, 152, 156, 159

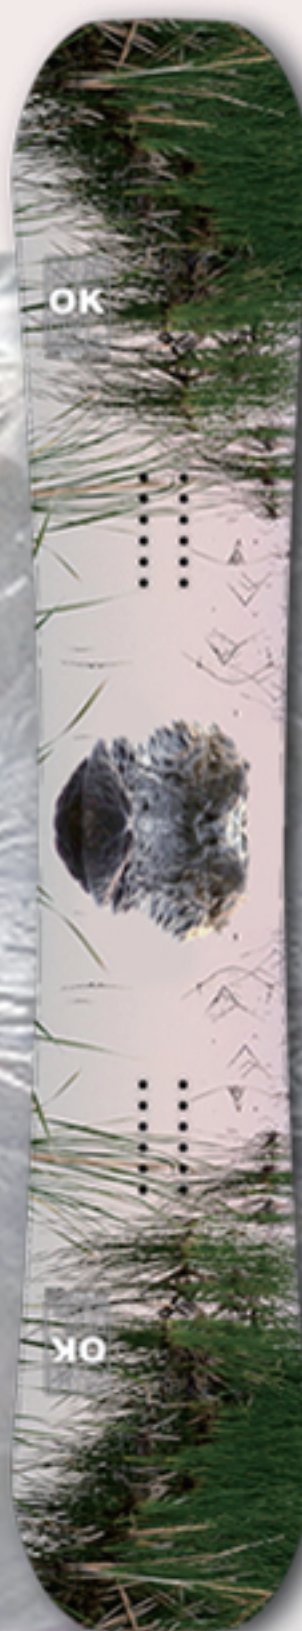

ATX- FLAT FROM CONTACT TO CONTACT

Inspired and designed by Nial Romanek with an Awesymmetrical sidecut, Nial's own tip design and custom flex pattern coupled with Nial's preferred ATX Flat Camber Profile.

Nial has been sitting on this Crocodile graphic idea for a few years and we are stoked to be able to make it happen for him.

The AnNIALator is literally exactly what Nial wanted in his board and is a direct example of his ideal setup.

**V.D.F.L.U.**

Variable Density Fiberglass Layup. An extra layer of secret material to reinforce high impact areas for longer board life.

**Certified Renewable Good Wood Core**

Full length Aspen wood core hand picked and sourced from an I.S.C. certified U.S. lumber mill.

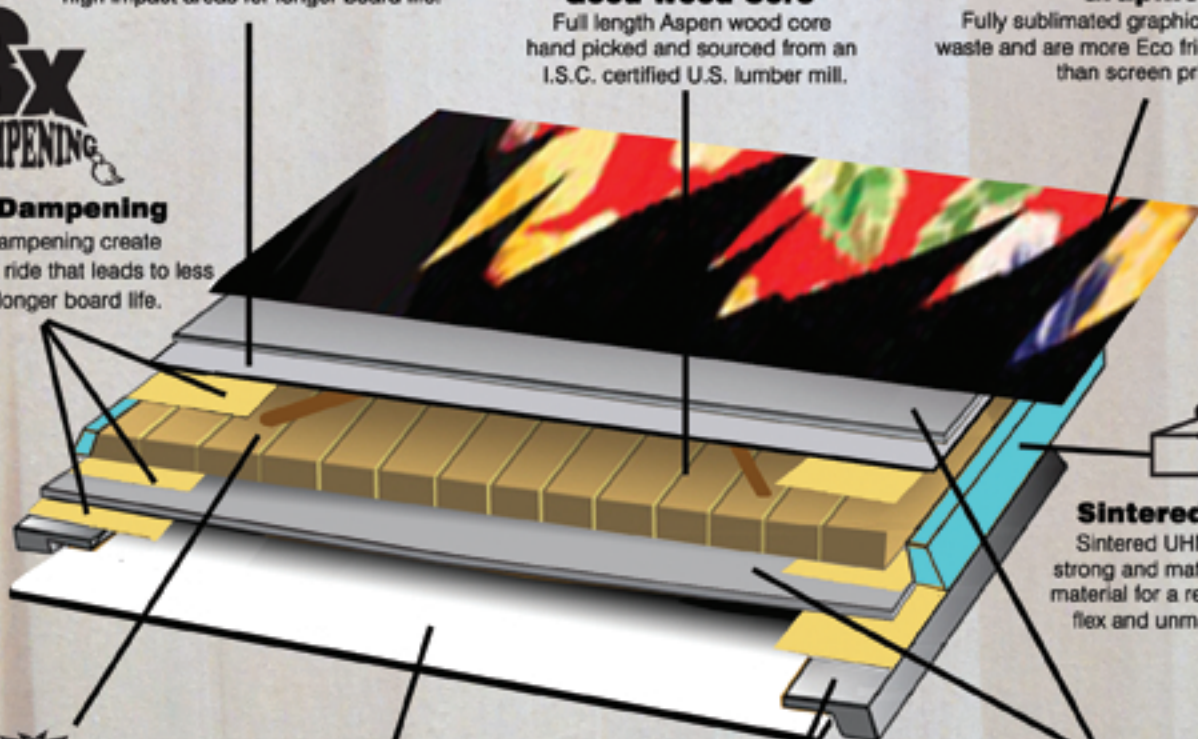

**Fully Sublimated Graphics**

Fully sublimated graphics reduce ink waste and are more Eco friendly and vibrant than screen printing.

**3 Stage Dampening**

3 layers of dampening create a vibration free ride that leads to less fatigue and longer board life.

**PoP Gnarley**

Natural hemp stringers tune out vibrations and transfer energy from boot to contacts increasing response with unequalled pop.

**Sintered 6K Base**

Dense, fast, 1/3 thicker than the industry standard this base material is the toughest and fastest available. Penetrate a layer of high fluoro One Ball Jay wax before you ride it and be the fastest on the hill for life.

**Rockwell 48 Hardened Edges**

1/3 thicker than industry standard and heat treated to rockwell 48 standards for unmatched strength

**Sintered Sidewalls**

Sintered UHMW sidewalls are strong and matched to our base material for a reliable, consistent flex and unmatched durability.

**Tri Axe Fiberglass**

Two layers of fiberglass with a three axis weave sandwich the core. The criss cross pattern creates a consistent, strong, torsionally responsive ride.

Asymmetrical sidecuts varying in degree and radius compensate for natural bio mechanical shortcomings in a subtle but functional way

True Twin means identical from tip to tip, even on the Asym's. Go regs or switch with zero variance in ride including flex and sidecut.

Magnetraction licensed from Mervin Mfg. A series of "bumps" in the sidecut create a serrated knife blade effect for unequalled edge hold.

Certified Renewable Good Wood Cores come from an ISC Certified lumber mill. Hand selected and built without finger joints.

Two layers of fiberglass with a three axis weave sandwich the core. The criss cross pattern creates a tortinally consistent ride.

We stand behind our boards with an industry leading 3 year warranty against manufacturer defects and craftsmanship to protect your investment.

Natural hemp stringers tune out vibrations and transfer energy from boot to contacts increasing response with unequalled pop.

Three layers of dampening create a vibration free ride that leads to less fatigue and longer board life. 3X the industry standard.

Variable Density Fiberglass Layup. An extra layer of secret material to reinforce high impact areas for longer board life and increased protection.

Dense, fast, and 1/3 thicker than the industry standard this UHMW base material is the toughest avail. Penetrate a layer of high fluoro One Ball Jay first wax and stay fast.

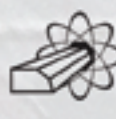

Whenever possible we use recycled plastics, reduce waste, in our processes, and reuse material to minimize our impact on our world. Better ecology through better quality

1/3 thicker than the industry standard and heat treated to Rockwell 48 standards for unmatched strength. Full wrap edges for life!

Our custom, proprietary, and secret epoxy blend has an injection of rubber to aid in dampening the ride and creating the toughest bond ever.

Sintered UHMW sidewalls are strong and matched to our base material for a reliable, consistent flex and unmatched durability.

Skate Kicks by design are flat using only a short radius at the contact for exceptionally smooth buttery feel and a quick planing surface in soft snow.

Unheard of in the snow biz our bumper replacement has you covered if you break your stick. contact us for detail on how to send it back and get another at a slightly discounted rate.

Fully sublimated graphics reduce ink waste and are more eco friendly and vibrant than screen printing. Add that to the R3 list yo.

Blunt tips are shorter than traditional radial tips creating more deck per cm. of overall length which lowers swing weight and increases effective edges.

Skate wheel urethane tips are super tough, and their composition helps deflect impact as well as dampen vibrations for the smoothest ride ever.

## UNDERSTANDING FLEX RATINGS

### **TTX- CAMBER DOMINANT ROCKER COMBO**

TRADITIONAL CAMBER WITH A SUSPENDED ROCKER HINGE IN THE CENTER FOR THAT CAMBER STABILITY WHILE STILL MAINTAINING A LOOSE, FUN RIDE ON A FLAT BASE.

### **CTX- ROCKER DOMINANT CAMBER COMBO**

ROCKER CENTER WITH RAISED CAMBER TIPS MAKES FOR A FUN SKATEY AND FLOATY RIDE WHILE STILL MAINTAINING THE CAMBER STABLE ZONES NEAR THE TIPS.

### **ATX- TOTALLY FLAT FROM CONTACT TO CONTACT**

FLAT FROM CONTACT TO CONTACT MAKES FOR A VERY FUN AND SUBMISSIVE RIDE THAT IS LITERALLY WAITING FOR YOUR NEXT COMMAND

### **DTX- FLAT UNDER FOOT ROCKER TO THE TIPS**

FLAT UNDER FOOT WITH ROCKER TIPS MAKES FOR A FUN, PRESSABLE SKATEY RIDE THAT IS PERFECT FOR SLIDING IN AND OUT OF ROTATIONS AND LANDING ZEACH

### **MTX- TRADITIONAL CAMBER**

CAMBER FROM CONTACT TO CONTACT MAKES FOR A TRADITIONALLY STIFF AND RESPONSIVE RIDE THAT IS STABLE AND SNAPPY.

### **WTX- EARLY RISE ROCKER NOSE CAMBER TAIL**

EARLY RISE ROCKER NOSE MAKES FOR UNMATCHED FLOAT WHILE A CAMBER TAIL MAKES FOR A STABLE LANDING PLATFORM THAT PUNCHES THROUGH THE POW.

### **WTF- EARLY RISE TIPS CAMBER UNDERFOOT**

EARLY RISE TIPS FOR MEGA FLOAT IN POWDER AND A SKATEY FUN RIDE WHILE A CAMBER CENTER GIVES THAT SNAP AND STABILITY YOU NEED IN THE WILD.

## JIB FLEX

GOOD FOR EVERYONE FROM NOOB TO PRO WITH OUR SOFTEST, MOST FORGIVING, EASY RIDING CORE. FROM FIRST TURNS TO SWITCH 5'S, THIS FLEX IS IDEAL FOR ANYONE WANTING A LOOSER AND VERY PRESSABLE RIDE THAT STILL HAS TONS OF POP.
